

## Buying Parts

We are currently working on improving our parts ordering system. Registered customers have 2 ways to identify the parts they require. First click on the Customer Login button then the Document Area and select the part list category. If there is a part listing for your machine model you can select it. A PDF format document will appear that has drawings and part listings. Left click on items enclosed in a red rectangle and you'll see detailed part information and even pictures of some of the more commonly replaced parts. You may also click on the parts and items link and enter search criteria or just browse through the categories.
